10 Ways To Be 10x More Productive Using AI

A practical guide for business owners and employees who want to make more money, get more done, and use AI the right way.

Inside: 10 productivity tips, smarter workflows, and a live event invitation

10 Ways To Be 10x More Productive Using AI

Your productivity determines how much money you will make over the coming months as a business owner or an employee. These 10 tips were designed to put you ahead of the person next to you, whether that's a coworker or a competitor.

1

1. Become the person who brings answers, not questions.

Before any meeting or decision, ask AI to lay out the options, the risks, and what you might be missing. While everyone else is guessing, you walk in with a plan. That's how you become the most valuable person in the room.

2

2. Make AI your first draft on everything you write.

Emails, proposals, reports, posts. Let it write version one, then make it sound like you. The person who turns a 2-hour task into 10-minutes is the person who is seen as a leader.

5

5. Turn one piece of work into ten.

One recording, document, call, or idea can become a summary, an email, a post, a follow-up, and an action list. That's how 1-hour of work starts creating value in more than one place.

6

6. Use AI as the expert you could never afford to hire.

Brainstorm with AI to pressure-test a decision, stress-test a strategy, or get a second opinion before you spend money, hire someone, launch something, or walk into a hard conversation.

3

3. Feed your AI details, not vague requests.

Paste the exact numbers, the email thread, or the customer problems before you ask it to do work. Most people get weak answers because they give weak input. More detailed input gives you much better replies from AI.

4

4. Build a library of what works.

Every time AI gives you something useful, tell it to save the exact words you used. Soon you'll have a personal toolkit that helps you write faster, think clearer, and stop wasting time starting from scratch.

7

7. Read the one paragraph that matters.

Aim your AI at any long report, contract, proposal, or thread and ask for the key points, hidden risks, and next steps. While others drown in information, you find what matters and act on it first.

8

8. Hand off the work that slows you down.

Tell AI to take over all repetitive tasks that eat your day. You can then focus on what makes money, creates progress, and gets noticed. AI can do all your busy work, so you can focus on high-value work.

9

9. Stop chasing the perfect prompt.

Go with your best prompt first but then put AI to work. Tell it to make its reply "more concise" or "show me what I missed." The person who keeps improving the answer gets better results than the person who overthinks the first prompt.

10

10. Automate the one task that eats your week.

Don't use AI for everything at once. Pick the single task costing you the most time, money, or attention and solve that first. One win gives you the momentum to take control of your whole week.

Start here this week

Do numbers 1, 2, and 7 first. Three habits, and you'll already be ahead of most people in your building or your industry.

You don't need to be technical. Not one of these requires coding, a degree, or buying anything new. The people winning with AI are not smarter than you. They just started using it the right way sooner.

This checklist was built to save you hours, improve your decisions, and make you more valuable, but it is just the tip of the iceberg.

The people who are really pulling ahead aren't just using AI for random tasks. They are learning how to use it the right way: turning AI into systems that improve their productivity, save time, and help avoid expensive mistakes.

That's exactly what everyone gets at the **Winning With AI** event!

Imagine what one day in a room with some of the world's top AI experts can do for your productivity, your bank account and your life.

"I was worried about what was going to happen over the next three to six months of our business... but the stuff my team is now delivering used to take three months, we're doing it in two, three days."

Eric Berman - Founder & CEO, Brandetize

"I'm a tough critic, but even I was blown away... this literally saved me thousands of dollars a month without even realizing it."

Mike Hill

"With no coding experience, no background in this at all... I've been able to completely revolutionize my company."

Reven Big - Founder & CEO, Life 180

"He not only made it simple, he made it very profitable."

Rich Schefren
