10 WAYS TO

Be 10x More Productive Using AI

A practical guide for business owners and employees who want to make more money, get more done, and use AI the right way.

Inside: 10 productivity tips, smarter workflows, and a live event invitation

10 Ways To Be 10x More Productive Using AI

Your productivity determines how much money you will make over the coming months as a business owner or an employee. These ten habits are designed to put you ahead of the person next to you, whether that is a coworker or a competitor.

A large, stylized blue 'AI' logo on a dark blue square background.

Use it with intent.

1

HABIT ONE

Become the person who brings answers, not questions.

Before any meeting or decision, ask AI to lay out the options, the risks, and what you might be missing. While everyone else is guessing, you walk in with a plan.

2

HABIT TWO

Make AI your first draft on everything you write.

Emails, proposals, reports, posts. Let AI write version one, then make it sound like you. Turning a two-hour task into ten minutes gets noticed.

HABITS 3-4

Better inputs create better outputs.

Specificity is the difference between a generic AI answer and a useful business asset.

3

Feed your AI details, not vague requests.

Paste the exact numbers, the email thread, or the customer problems before you ask it to do the work. Most people get weak answers because they give weak input. Detailed input produces better replies.

4

Build a library of what works.

Every time AI gives you something useful, save the exact words you used. Soon you will have a personal toolkit that helps you write faster, think clearer, and stop starting from scratch.

HABITS 5-6

Turn one effort into usable leverage.

Use each completed task as raw material for the next output, decision, or conversation.

5

Turn one piece of work into ten.

One recording, document, call, or idea can become a summary, an email, a post, a follow-up, and an action list. That is how one hour of work starts creating value in more than one place.

6

Use AI as the expert you could never afford to hire.

Brainstorm with AI to pressure-test a decision, stress-test a strategy, or get a second opinion before you spend money, hire someone, launch something, or walk into a hard conversation.

HABITS 7-8

Find the signal. Hand off the drag.

Productivity is not doing more low-value work. It is protecting attention for the work that moves money, decisions, and momentum.

7

Read the one paragraph that matters.

Aim AI at any long report, contract, proposal, or thread and ask for the key points, hidden risks, and next steps. While others drown in information, you find what matters and act first.

8

Hand off the work that slows you down.

Tell AI to take over the repetitive tasks that eat your day. You can then focus on what makes money, creates progress, and gets noticed. AI can handle busy work while you focus on high-value work.

HABITS 9-10

Improve the answer. Then automate the drag.

9

Stop chasing the perfect prompt.

Go with your best prompt first, then put AI to work. Ask it to make the reply more concise or show what you missed. Better results come from improving the answer, not overthinking the first prompt.

10

Automate the one task that eats your week.

Do not use AI for everything at once. Pick the single task costing you the most time, money, or attention and solve that first. One win gives you momentum to take control of the whole week.

Start here this week

Do numbers 1, 2, and 7 first.

Three habits put you ahead of most people in your building or industry.

1

You do not need to be technical. Not one of these habits requires coding, a degree, or buying anything new. The people winning with AI are not smarter than you. They just started using it the right way sooner.

This checklist will save you hours, improve your decisions, and make you more valuable, but it is just the tip of the iceberg.

The people really pulling ahead are not using AI for random tasks. They are learning how to turn AI into systems that improve productivity, save time, and help avoid expensive mistakes.

That is exactly what **Winning With AI** delivers.

Imagine what one day in a room with some of the world's top AI experts can do for your productivity, your bank account, and your life.

Work that used to take three months is now getting done in two or three days.

Eric Berman

I am a tough critic, but even I was blown away. This saved me thousands of dollars a month.

Mike Hill

With no coding experience, I have been able to completely revolutionize my company.

Reven Big

He made it simple, and he made it very profitable.

Rich Schefren
